

( It will be applied from 2019-2020 Fall)

**İZMİR INSTITUTE OF TECHNOLOGY**

**GRADUATE SCHOOL OF ENGINEERING AND SCIENCES**

**DEPARTMENT OF PHOTONICS SCIENCE AND ENGINEERING**

**CURRICULUM OF THE PhD PROGRAM IN PHOTONICS SCIENCE AND ENGINEERING**

The Photonics Science and Engineering PhD Program is a jointly operated interdisciplinary program. The Curriculum is supported by the graduate courses available at the Departments of Chemistry, Electrical and Electronics Engineering, and Physics.

**Core Courses**

<b>PHOT 502</b>	<b>Fundamentals of Photonics I*</b>	<b>(2-2)3 / 9 ECTS</b>
<b>PHOT 504</b>	<b>Quantum Photonics I*</b>	<b>(2-2)3 / 9 ECTS</b>
PHOT 510	Ethical Issues in Research Methods*	(0-2)Kredisiz / 7 AKTS
PHOT 600	PhD Thesis	(0-1)NC / 26 ECTS
PHOT 601	Seminar	(0-2)NC / 8 ECTS
PHOT 8XX	Special Studies	(8-0)NC/ 4 ECTS

\* If these courses were taken during previous studies, they can be exempted.

**Requirements of the Ph.D. program**

The students should take at least 7 courses with credits and at least 5 of them must be PHOT5XX coded. The students with M.S. degrees must obtain at least 240 ECTS to graduate.

The students accepted to the Ph.D. program by B.S. degree should take at least 14 courses with credits and at least 10 of them should be PHOT5XX coded. Those students must obtain at least 300 ECTS to graduate.

The course listings for the various PhD Specialization Areas in Photonics are listed below.

**Elective Courses**

<b>PHOT 503</b>	<b>Fundamentals of Photonics II</b>	<b>(3-0)3 / 7 ECTS</b>
PHOT 505	Applied Photonics	(0-6)3 / 7 ECTS
PHOT 506	Photonic Materials and Devices	(3-0)3 / 7 ECTS
PHOT 507	Computational Photonics	(3-0)3 / 7 ECTS
PHOT 508	Mathematical Methods in Photonics	(3-0)3 / 7 ECTS

*Field 1: Molecular photonics and photonic devices:*

PHOT 511	Photophysics	(3-0)3 / 7 ECTS
PHOT 512	Molecular Photonics	(3-0)3 / 7 ECTS
PHOT 513	Molecular Electronics and Devices	(3-0)3 / 7 ECTS
PHOT 514	Photovoltaics	(3-0)3 / 7 ECTS
PHOT 515	Thin-film Transistors	(3-0)3 / 7 ECTS
PHOT 516	Radiation Detectors	(3-0)3 / 7 ECTS
PHOT 517	Organic Light Emitting Devices	(3-0)3 / 7 ECTS
PHOT 518	Low-dimensional Materials	(3-0)3 / 7 ECTS

*Field 2: Quantum photonics and optical spectroscopy:*

**( It will be applied from 2019-2020 Fall)**

PHOT 521 Quantum Photonics II	(3-0)3 / 7 ECTS
PHOT 522 Optical Spectroscopy	(3-0)3 / 7 ECTS
PHOT 523 Nonlinear Optics	(3-0)3 / 7 ECTS

*Field 3: Biophotonics and mediphotonics:*

PHOT 531 Biophotonics	(3-0)3 / 7 ECTS
PHOT 532 Medical Photonics	(3-0)3 / 7 ECTS
PHOT 533 Biomedical Imaging and Image Processing	(3-0)3 / 7 ECTS

*Field 4: Laser engineering and photonic integrated circuits:*

PHOT 541 Lasers	(3-0)3 / 7 ECTS
PHOT 542 Laser Engineering	(3-0)3 / 7 ECTS
PHOT 543 Optical Instrumentation	(3-0)3 / 7 ECTS
PHOT 544 Integrated Photonic Circuits	(3-0)3 / 7 ECTS
PHOT 545 Basics of Lighting	(3-0)3 / 7 ECTS

**For the students start to program with M.S. degrees**

**Total credit (min.) : 21 / 240 ECTS**

**Number of courses with credit (min.): 7**

**For the students start to program with B.S. degrees**

**Total credit (min.) : 42 / 300 ECTS**

**Number of courses with credit (min.): 14**

## COURSE DESCRIPTIONS

**PHOT 600 PhD Thesis (0-1)NC/ 26 ECTS**

A research topic which can be experimental and/or theoretical has to be pursued. Under supervision of an advisor/s, students write a thesis about topic that is allocated. The requirements set by the İzmir Institute of Technology should be fulfilled.

**PHOT 601 Seminar (0-2)NC/ 8 ECTS**

The course consists of presentations of new scientific papers from high-profile journals by the students. The purpose of the paper, results, and conclusions must be presented, and a critical discussion of the methods and the results should also be included. Thesis proposal seminar must be presented as well.

**PHOT 502 Fundamentals of Photonics I (2-2)3 / 9 ECTS**

**The basic descriptions of light as rays (geometrical optics), waves (physical optics), and photons. Electromagnetic theory of light. Reflection and refraction of light rays and waves from planar and curved surfaces.**

**PHOT 503 Fundamentals of Photonics II (3-0)3 / 7 ECTS**

**Wave propagation through dielectric media and optical waveguides, photonic crystal optics, resonator optics, laser optics and fiber optics.**

**PHOT 504 Quantum Photonics I (2-2)3 / 9 ECTS**

Particles as waves, Schrödinger's equation. Expectations values, operators, eigenvalues, and stationary states. Dirac formalism. Commutators, unitary transformations, and matrix representation. Symmetry and conservation laws. Free particles, the potential well, and the harmonic oscillator. Quantum theory of light, matter and its interaction.

**PHOT 505 Applied Photonics (0-6)3 / 7 ECTS**

Design and fabrication of photonic devices such as photodetectors, LEDs and optical circuits; and measurement of optical processes; estimation of process through computational approaches.

**PHOT 506 Photonic Materials and Devices (3-0)3 / 7 ECTS**

Bulk crystals, single crystals, epitaxial crystals, narrow band-gap, wide band-gap semiconductors, structural characterization, electrical characterization, III-V ternary and quaternary compounds, electron transport within the III-nitride semiconductors, II-IV semiconductors for optoelectronics, II-VI narrow band gap semiconductors, Luminescent materials, quantum wells, band gap engineering, novel materials and selected applications, organic materials for chemical sensing, packaging materials, photoconductivity, electronic properties of semiconductor interphases, charge transport in ordered and disordered materials, graphene-based photonics, materials challenges for solar power, photoelectrochemistry and hybrid solar conversion, lighting.

**PHOT 507 Computational Photonics (3-0)3/ 7 ECTS**

Maxwell's equations, waveguides and eigenmodes. Finite-difference time domain method, finite-difference frequency domain method, finite element method, Fourier method, contemporary problems in computational photonics.

**PHOT 508 Mathematical Methods in Photonics (3-0)3/ 7 ECTS**

Complex analysis, Fourier transform theory, linear algebra, vector algebra, ordinary and partial differential equations (e.g., wave equation), special functions (e.g., Bessel functions), numerical methods for solving ODE's and PDE's, eigensystems.

( It will be applied from 2019-2020 Fall)

**PHOT 510 Ethical Issues in Research Methods (0-2)NC / 7 ECTS**

Ethical issues with some examples will be presented. The ethical rules in conduct will be overviewed.

**PHOT 511 Photophysics (3-0)3/ 7 ECTS**

Helping the students correlate the following topics: electromagnetic spectrum and interaction between material and solar radiation (AM1.5); absorption and emission in molecular structures; determination of ground state and excited state behaviors; photophysical processes (dipole-dipole interaction, electron exchange, quenching, etc); electron transfer processes that starts photochemical processes; differences of photophysical and photochemical processes and their impact on application areas.

**PHOT 512 Molecular Photonics (3-0)3/ 7 ECTS**

Light-matter interactions, fundamentals of photonics, basic instrumentation, fluorescence spectroscopy, quenching, anisotropy, fluorescence resonance energy transfer, fluorescence sensing, radiative decay engineering, fluorescence microscopy and nanoscopy.

**PHOT 513 Molecular Electronics and Devices (3-0)3/ 7 ECTS**

Semiconductor and molecular semiconductor definition and basics. Energy technologies (from source to use) and semiconductors. Semiconductor coatings. Optoelectronic applications. Bio- and medical photonics. Metal oxide based photocatalytic degradations. Photodetectors. Solar cells. Light emitting diode-LED and molecular and polymeric correspondences. Lasers. Transistors.

**PHOT 514 Photovoltaics (3-0)3/ 7 ECTS**

Introduction on semiconductors and controlling the band structures of semiconductors by dopping. Introduction on photovoltaic effect on semiconductors and basics of solar cells. Types of solar cells and state of the art in solar cell technology. Brief introduction on traditional solar cell technologies: c-Si solar cells and bulk thin film solar cells. Limitations in traditional solar cells. Why new generation photovoltaic technologies are needed. Physical structure, working principles, electronic properties and performance of tandem photovoltaic systems. Introduction to impact ionization (multiple exciton generation, MEG). Chemical and physical structures, working principle and electronic properties of quantum dot and mid-band (intermediate band) solar cells and their relationship with performance of mid-band solar cells. Introduction to excitonic solar cells. Chemical and physical structures, working principle and electronic properties of organic and plastic photovoltaic systems and their relationship with performance of Organic, plastic and hybrid photovoltaic systems. Chemical and physical structures, working principle and electronic properties of dye sensitized and perovskite solar cells. Definition of the parameters to improve the efficiencies of dye sensitized and perovskite solar cells.

**PHOT 515 Thin-film Transistors (3-0)3 / 7 ECTS**

The subject-specific course on thin-film transistors (TFT) is organized as one-semester course for Master's and Ph.D. students, covering related knowledge of TFT device physics, modeling, circuit design, processing, characterization, and display technologies. A term project is required for the students to understand and deepen the design concept along with the theoretical support within the course.

**PHOT 516 Radiation Detectors**

**(3-0)3 / 7 ECTS**

Modern scientific research based on single photon detection, low energy x-ray detection for synchrotron research, gamma ray detection for nuclear security, terahertz detection for imaging and material science, ultra sensitive IR detectors for bolometric research, millimeter wave detection for imaging through the barriers will be covered within this master's level course. Superconducting tunnel junctions, Transition edge sensors, scientific CCD, CMOS and Si-strip detectors, superconducting terahertz detectors and hybrid systems for mm wave detectors will be discussed as introductory levels.

**PHOT 517 Organic Light Emitting Devices**

**(3-0)3 / 7 ECTS**

Making students, familiar to light emitting diodes and their organic correspondences that are used in energy efficient lighting and display technologies; understand the relationships between the chemical structures and physical properties of organic molecules, energy levels, exciton types and their diffusions; decide thin film and pattern preparation technique; apply experimental techniques and calculations for the determination of electrical parameters during device operation; and design organic light emitting devices.

**PHOT 518 Low-dimensional Materials**

**(3-0)3 / 7 ECTS**

What is dimension, quantum confinement, low-dimensional structures, formation and synthesis of low-dimensional structures, structural, electronic, magnetic, vibrational, optical and transport properties of materials in two, one and zero dimensions.

**PHOT 521 Quantum Photonics II**

**(3-0)3/ 7 ECTS**

Quantization of light field, quantum states of light, optical coherence theory, atom-photon interaction (quantum and semi-classical theory), open quantum systems. Quantum gases.

**PHOT 522 Optical Spectroscopy**

**(3-0)3/ 7 ECTS**

Basics of light-matter interaction. Common components of different optical spectroscopy techniques. Spectroscopy systems. Absorption and emission spectroscopy. IR and Raman spectroscopy. Time-resolved spectroscopy. Non-linear spectroscopy. Laboratory work.

**PHOT 523 Nonlinear Optics**

**(3-0)3/ 7 ECTS**

Overview of basic formalism and classification of nonlinear optical processes; non-phase matched processes, phase-matched processes, slow nonlinear optics, microscopic (quantum) origins of nonlinear susceptibilities. Nonlinear optical susceptibilities; wave propagation and coupling in nonlinear media; harmonic, sum, and difference frequency generation; parametric amplification and oscillation; phase-conjugation via four-wave mixing; self-phase modulation and solitons.

**PHOT 531 Biophotonics**

**(3-0)3/ 7 ECTS**

Review of fundamental optics, light-tissue interaction, basics of microscopy, optical biosensors, fluorescence spectroscopy, FRAP, FRET, optogenetics, neurophotonics, photodynamic therapy, optical microscopy methods, confocal microscopy, nonlinear microscopies, optical coherence tomography.

( It will be applied from 2019-2020 Fall)

**PHOT 532 Medical Photonics (3-0)3/ 7 ECTS**

Review of optics, photon-tissue interactions, medical diagnosis and monitoring therapy, theranostics methods and applications, photodynamic therapy, molecular imaging, MRI, SPECT, PET, endoscopy.

**PHOT 533 Biomedical Imaging and Image Processing (3-0)3/ 7 ECTS**

Biomedical imaging technologies. Image reconstruction and noise reduction techniques. Segmentation and mathematical morphology. Bioimaging in histopathology. Digitized histological slides: sectioning of tissue samples, immunohistochemical staining, image acquisition. Preprocessing of histology image data. Tissue segmentation. Region segmentation. Segmentation and morphological characterization of cell nuclei. Abnormality detection via pattern classification.

**PHOT 541 Lasers (3-0)3/ 7 ECTS**

Resonant Optical Cavities, Atomic Radiation, Laser Oscillation and Amplification, Characteristics of Lasers, Laser Excitation, Semiconductor Lasers.

**PHOT 542 Laser Engineering (3-0)3/ 7 ECTS**

Basics and design of Semiconductor lasers, solid state lasers and fiber lasers.

**PHOT 543 Optical Instrumentation (3-0)3/ 7 ECTS**

Light sources and detectors, noise, optical components, polarization of light and polarizers, designing and building electro-optical systems.

**PHOT 544 Integrated Photonic Circuits (3-0)3 / 7 ECTS**

On-chip waveguides, lasers and modulators. Design and analysis of on-chip photonic components and systems. Current literature on silicon photonics and III-V system.

**PHOT 545 Basics of Lighting (3-0)3/ 7 ECTS**

Covers the fundamentals, generalities, and specific applications; Gives priority to people over lighting technology; Provides up-to-date reviews of the role of lighting in visual performance, visual discomfort and visual perception; Delivers detailed reviews of how the lighting of offices, industry, and roads affects people; Examines the role of lighting as it affects human safety, crime, the elderly, and health; Explores how people react to light pollution and how they use lighting controls.

**PHOT 8XX Special Studies (8-0)NC/ 4 ECTS**

Graduate students supervised by the same faculty member study advanced topics under the guidance of their advisor.

( It will be applied from 2019-2020 Fall)
