

**(It will be applied from 2018-2019)**

**İZMİR INSTITUTE OF TECHNOLOGY  
GRADUATE SCHOOL OF ENGINEERING AND SCIENCES  
DEPARTMENT OF ENVIRONMENTAL ENGINEERING  
CURRICULUM OF THE Ph.D. PROGRAM IN ENVIRONMENTAL SCIENCE AND  
ENGINEERING**

**Core Courses**

CHE 533	Mass Transport in Environmental Engineering	(3-0)3	[7]
ENV 601*	Fundamentals of Environmental Technology	(3-0)3	[8]
ENV 602	Advanced Environmental Chemistry	(3-0)3	[8]
ENV 591**	Technical Writing, Research Methods, and Ethics	(0-2)NC	[7]
ENV 600	Ph.D.Thesis	(0-1)NC	[26]
ENV 698	Seminar	(0-2)NC	[7]
ENV 8XX	Special Studies	(8-0)NC	[4]

\*Mandatory for graduates of other than either BSc or MSc in Environmental Engineering

\*\*Mandatory for students who have not successfully completed this or an equivalent course for masters degree

Total credit (min.)	: 21 (for students with M.S. degree)
Number of credited courses (min.)	: 7 (for students with M.S. degree)
Total credit (min.)	: 42 (for students with B.S. degree)
Number of credited courses (min.)	: 14 (for students with B.S. degree)

**Elective Courses**

ENV 603	Environmental Statistics	(3-0)3	[8]
ENV 580	Special Topics in Environmental Engineering	(3-0)3	[7]
ENV 502	Environmental Biotechnology	(3-0)3	[7]
ENV 503	Sustainable Energy and Environment	(3-0)3	[7]
<i>ENV 504</i>	<i>Bioenergy Technologies</i>	<i>(3-0)3</i>	<i>[7]</i>
<i>ENV 505</i>	<i>Microalgal Biotechnology</i>	<i>(3-0)3</i>	<i>[7]</i>
<i>ENV 506</i>	<i>Environmental Exposure and Risk Assessment</i>	<i>(3-0)3</i>	<i>[7]</i>
<i>ENV 507</i>	<i>Indoor Air Pollution</i>	<i>(3-0)3</i>	<i>[7]</i>
<i>ENV 508</i>	<i>Air Pollution Control I</i>	<i>(3-0)3</i>	<i>[7]</i>
<i>ENV 509</i>	<i>Air Pollution Control II</i>	<i>(3-0)3</i>	<i>[7]</i>

In addition to ENV coded courses, elective\_courses are selected from related courses in other departments and other interdisciplinary graduate programs.

**(It will be applied from 2018-2019)**

**İZMİR INSTITUTE OF TECHNOLOGY  
GRADUATE SCHOOL OF ENGINEERING AND SCIENCES  
DEPARTMENT OF ENVIRONMENTAL ENGINEERING  
CURRICULUM OF THE Ph.D. PROGRAM IN ENVIRONMENTAL SCIENCE AND  
ENGINEERING**

**Course Descriptions**

**ENV 600 Ph.D. Thesis** (0-1)NC [26]

Original research work done by the student under supervision of an advisor and written in the graduate thesis format.

**CHE 533 Mass Transport in Environmental Engineering** (3-0)3 [7]

Mass transport equations of environmental engineering processes. Equations of sorption kinetics in continuous flow reactors. Transport equations of fixed film exchange. Electrodialysis. Biological processes. Fixed culture processes and suspended culture processes.

**ENV 601 Fundamentals of Environmental Technology** (3-0)3 [8]

Water quality and control, air quality and control, solid waste management

**ENV 602 Advanced Environmental Chemistry** (3-0)3 [8]

Chemical processes in environmental systems, equilibrium conditions in aquatic systems and atmospheric reactions. Acid-base, dissolution-precipitation, air-water exchange, and oxidation-reduction reactions.

**ENV 603 Environmental Statistics** (3-0)3 [8]

Numerical-Graphical Data Representation-Summary, Random Variables-Probability Distributions, Hypothesis Testing, Simple and Multiple Linear Regression, Nonparametric Tests, QA/QC Measures, Data Censoring.

**ENV 502 Environmental Biotechnology** (3-0)3 [7]

Microorganisms in the nature readily conduct many different types of conversion processes that are vital in the operation of biosphere. Environmental biotechnology is a rather new and very dynamic domain that aims at utilizing microbial processes for treatment purposes. In order to understand the microbial processes, one needs to deconstruct the microbial ecology responsible for those processes. At this point, the relationship between phylogeny and function within microbial community should be elucidated through employing recent advances in molecular techniques such as FISH, MAR, SIP, metagenomics, and proteomics. Moreover the means to manipulate microbial communities and pure cultures in order to conduct desired process (treatment, energy production) will be discussed.

**ENV 503 Sustainable Energy and Environment** (3-0)3 [7]

Estimation and evaluation of energy resources will be covered following the relationship between sustainable energy and sustainable development. Local, regional and global environmental effects of energy and sustainability metrics for energy systems will be investigated. Fossil fuels, nuclear power, and renewable energy resources will be addressed in terms of developed technology and sustainability metrics. Sustainability model applications will be discussed over current scientific literature.

**(It will be applied from 2018-2019)**

***ENV 504 Bioenergy Technologies***

**(3-0)3 [7]**

*Bioenergy is the energy derived from non-fossilized biomass. Compared to consumption of fossil fuels, bioenergy offers advantages in environmental and economic sustainability thus is expected to be one of the primary alternative energy sources of the future. This course will instruct the students on (i) current conventional energy sources and their environmental impacts, (ii) major feedstocks that are being cultivated, researched and developed for the generation of biodiesel, bioethanol, and biogas, and (iii) biochemical and thermochemical conversion technologies used for biofuel generation. In addition, promising technologies such as microbial fuel cells and photosynthetic microorganism based systems will be presented. Environmental impacts of bioenergy technologies will be discussed.*

***ENV 505 Microalgal Biotechnology***

**(3-0)3 [7]**

*Microalgae are photosynthetic single cellular microorganisms. The growth rate of these microorganisms can exceed those of most productive terrestrial plants by more than an order of magnitude with readily available inputs and without the requirement of critical resources such as cropping area and freshwater. More importantly, they can combine this fast-paced growth with wastewater treatment, CO<sub>2</sub> capture and biosynthesis of high value metabolites. These unique features created such an interest in microalgae that they are referred to as “green gold”. The main goals of this course will be to (i) explain the reasons behind the “green gold rush”, (ii) point out opportunities offered by microalgae for solving today’s world problems as well as their intrinsic limitations, (iii) present current cultivation systems and (iv) explain how these cultivation systems are designed and operated.*

***ENV 506 Environmental Exposure and Risk Assessment***

**(3-0)3 [7]**

*Evaluation of toxicological data, Human exposure assessment, Carcinogenic risk Chronic-toxic risk, Human health risk characterization, Risk communication, Risk Management, Ecological risk assessment.*

***ENV 507 Indoor Air Pollution***

**(3-0)3 [7]**

*Indoor air quality, Problem identification techniques, Sources of pollution indoors, Sampling and analysis methods, Control systems and mitigation techniques, Health effects of indoor air pollution*

***ENV 508 Air Pollution Control I***

**(3-0)3 [7]**

*Principles and modern practices employed in the design of engineering systems for the removal of particulate matter in environmental engineering. Design of control devices based on particulate matter and waste gas stream characteristics. Properties of particles, particle behavior in fluids, theory of particle control mechanisms, cyclones, fabric filters, electrostatic precipitators, wet scrubbers, auxiliary equipment for the removal of particulate matter from waste streams.*

***ENV 509 Air Pollution Control II***

**(3-0)3 [7]**

*Principles and modern practices employed in the design of environmental engineering systems for the removal of gaseous pollutants from waste streams. The course content consists of properties of gases and vapors, Incineration, Absorption, Adsorption, Control of VOCs, Control of SO<sub>x</sub>, Control of NO<sub>x</sub>, Control of gaseous motor vehicle emissions.*

**(It will be applied from 2018-2019)**

**ENV 580 Special Topics in Environmental Engineering** (3-0)3 [7]

Directed group study of special topics in environmental engineering

**ENV 591 Technical Writing, Research Methods, and Ethics** (0-2)NC [7]

Literature survey, critical review, research study design, conveying results of a study, research publication system, manuscript preparation, seminar preparation, ethical issues in research, ethical issues in publishing.

**ENV 698 Research Seminar** (0-2)NC [7]

Literature survey, critical review, research study proposal, oral presentation.

**ENV 8XX Special Studies** (8-0)NC [4]

Graduate students supervised by the same faculty member study advanced topics under the guidance of their advisor.
